

ShieldJob AI — 5-Minute LinkedIn Video Demo Guide

Live Camera + OBS Screen Walkthrough Script, Demo Assets & Post Strategy

Target Duration: 4:30 – 5:00
Minutes

Recording Mode: OBS Studio (PiP Facecam + Screen
Capture)

[LinkedIn Portfolio
Video](#)

1 Video Structure & Timing Timeline

Timestamp	Section Title	Visual Scene on OBS	Core Objective
0:00 – 0:45	Hook & Self Introduction	Full-Screen Facecam	Grab attention with a relatable scam problem & introduce yourself.
0:45 – 1:30	Motivation & Solution	Facecam + Web App Landing Tab	Explain why standard tools fail and introduce ShieldJob AI's ecosystem.
1:30 – 2:45	Live Demo: Flask Web App	Screen Share + Camera Bubble in Corner	Live scan of a fake job, show score breakdown, explainability & PDF export.
2:45 – 3:45	Live Demo: Chrome Extension	Screen Share (LinkedIn / Job portal)	Demonstrate 1-click scanning directly in the browser via Manifest V3.
3:45 – 4:30	Under the Hood (4 Pillars)	Screen Share (Accuracy & Metrics tab)	Highlight ML (97.5% acc), Gemini AI, Domain check & live reputation.
4:30 – 5:00	Conclusion & Call to Action	Full-Screen Facecam	Summarize key learnings, invite comments & direct to GitHub repository.

2 Scene-by-Scene Word-for-Word Speaking Script

0:00 – 0:45 (45s) | Scene 1: The Hook & Intro

 Visual: Full-Screen Camera (Confident, Smiling)

"Hi everyone! I'm **[Your Name]**, an aspiring AI and Software Engineer.

Have you or someone in your network ever applied for an online job, only to receive a shady email asking for a 'refundable security deposit' or directing you to an interview on Telegram?

Employment fraud is at an all-time high, targeting students and remote job seekers. To tackle this challenge during my internship, I built **ShieldJob AI** — an intelligent, multi-pillar detection platform that analyzes job postings in real time to protect applicants before they click apply."

 **Delivery Tip:** Look directly into the camera lens with energetic pacing. Hook the viewer in the first 10 seconds.

0:45 – 1:30 (45s) | Scene 2: Problem Statement & Why ShieldJob AI

 Visual: Switch to Screen Share (Web App Landing) + Camera in Corner

"When researching existing solutions, I noticed that most tools rely solely on basic keyword matching. But modern scammers are smart: they copy real company branding and create convincing fake websites.

*I wanted to build a production-grade system that goes beyond surface text and evaluates the **entire recruitment ecosystem**: analyzing text patterns, verifying company domain authenticity, and auditing online social reputation.*

Let's jump right into a live demonstration to see how it works!"

1:30 – 2:45 (75s) | Scene 3: Live Demo — Flask Web Application

🖥️ Visual: Web App at <http://127.0.0.1:5000> (Dark Cyber Sentinel Theme)

"Here is the **ShieldJob AI** web application. It's built on Flask with a responsive single-page architecture.

Let's test a suspicious job description: a remote Data Entry role offering \$5,000 a week with an upfront registration fee via Telegram.

I paste the description, enter the website URL, and hit '**Analyze Job Safety**'...

Within seconds, ShieldJob AI gives us a multi-dimensional assessment:

- **Unified Safety Score:** It immediately classifies this posting as **High Risk / Fake Job** (Rose/Red) with a safety score under 50.
- **Explainable AI Insights:** It pinpoints exact red flags — unrealistic salary anomalies, payment demands, and suspicious communication channels.
- **Audit Features:** The scan is saved locally in our **Scan History** tab, and we can generate a downloadable **PDF Report** with a single click."

💡 **Action Tip:** Keep the sample text copied in your clipboard or a notepad so you can paste and click analyze smoothly without delays.

2:45 – 3:45 (60s) | Scene 4: Live Demo — Chrome Extension

🖥️ Visual: Switch to LinkedIn / Job Board tab with Extension Popup

"Now, we know that job seekers don't want to switch tabs and copy-paste text for every single job they see. To make this seamless, I also built a **Google Chrome Extension (Manifest V3)**.

Imagine you're browsing jobs on LinkedIn or Internshala. With one click on the **ShieldJob AI** extension icon:

It communicates directly with our backend REST API, evaluates the posting, and displays the safety gauge and risk highlights right inside your browser popup.

It gives applicants instantaneous, frictionless protection directly at the point of application."

3:45 – 4:30 (45s) | Scene 5: Under the Hood (The 4-Pillar Engine)

🖥️ Visual: 'Accuracy & Proof' or 'How It Works' Tab on the Web App

"Behind the scenes, ShieldJob AI uses a balanced **4-Pillar Scoring Architecture**:

1. **Machine Learning (30%):** A Random Forest classifier with TF-IDF vectorization trained on ~17,880 historical job postings, achieving **97.5% accuracy** and an **85.3% fraud recall**.
2. **Generative AI (30%):** Powered by Google Gemini to analyze nuanced recruitment intent, compensation realism, and subtle scam triggers.
3. **Website Verification (20%):** Scraping and checking SSL security and domain credibility.
4. **Reputation & Social Verification (20%):** Cross-referencing real-time web search and community scam databases.

This multi-layer validation drastically cuts down both false positives and missed scams."

4:30 – 5:00 (30s) | Scene 6: Conclusion & Call to Action

 Visual: Full-Screen Facecam (Warm & Professional)

"Building ShieldJob AI has been an incredible hands-on journey in full-stack AI engineering — combining Machine Learning, LLMs, Flask APIs, and browser extensions into a user-centric product.

The entire project is open-source and available on my GitHub. I've linked the repository in the post description.

I would love to hear your thoughts, feedback, and ideas in the comments below. Thank you so much for watching!"

3 Demo Test Data & OBS Setup Checklist

🔥 Sample Scam Job (For Demo)

Paste this during the Web App demo:

```
Role: Remote Data Entry & Form Filling
Company: Global Tech Solutions Ltd
Salary: $5,000 / week (No experience needed)
Website: http://www.globaltech-quickjobs.xyz
```

```
Description:
Earn $5,000 weekly from home! Immediate
start.
Requirements: Any smartphone or laptop.
To confirm your seat, send a refundable
registration fee of $50 via Telegram to
@HR_Recruiter_2026.
```

🎥 OBS Studio Quick Settings

- **Resolution:** 1920 x 1080 (16:9, 30 or 60 fps).
- **Layout:** Screen Capture on Canvas + Camera in a bottom-right rectangle (Picture-in-Picture).
- **Hotkeys:** Set F9 to Start/Stop Recording and F10 to switch between Full Facecam and Screen Share.
- **Audio:** Keep mic volume in the green/yellow zone (-12dB to -6dB).
- **Browser Setup:** Fullscreen browser (F11), clean dark theme, zoom at 100% or 110%.

4 Companion LinkedIn Post Copy (Ready to Paste)

🔥 Spotting fake jobs before they scam you: Introducing ShieldJob AI 🛡️

With remote hiring on the rise, recruitment scams have become increasingly sophisticated – from phantom job drives to advance-fee fraud.

During my recent internship, I set out to solve this real-world problem by building ShieldJob AI – an end-to-end AI system that verifies job legitimacy in seconds.

📺 Check out the 5-minute live demo video above!

🌟 Key Highlights & Features:

- ♦ **4-Pillar Scoring Engine:** Combines Scikit-Learn ML (97.5% Accuracy), Google Gemini AI, Domain Verification, and Social Reputation.
- ♦ **Explainable AI:** Doesn't just give a blind score; it highlights exact scam triggers (salary anomalies, suspicious telegram contacts, upfront fees).
- ♦ **Chrome Extension (Manifest V3):** 1-click verification directly on LinkedIn and job portals.
- ♦ **Exportable PDF Reports & Local Scan History tracking.**

💻 **Tech Stack:** Python (Flask), Scikit-Learn (Random Forest), Google Gemini AI, BeautifulSoup, JavaScript (SPA + Manifest V3 Extension), CSS3.

Check out the code & documentation on GitHub: [Your GitHub Repo Link]

I would love to hear your thoughts and feedback in the comments! 🙌
